

## Agenda 11-13-14

### Employ.me

- Go over design
  - does it represent what we intend it to?
    - Simple, quick, effective
  - Are we actually providing a solution for the problem?
  - Are the purposes and concepts accurate?
  - Our app is as a CRUD app
    - Is this ok? Ideas to avoid this?
- What does our MVP look like?
  - What are the necessary parts?
    - Basic API and views for students to create accounts and sign on
      - excluding security and authentication
    - Basic search functionality and view for results
    - Student profile page
    - Tag pool
  - What should we be able to leave out?
    - Security and authentication
    - Employer accounts
    - A complete tag pool and all class to tag conversions
    - Completed UI design
    - Full question for student profile creation
    - Function for converting some classes into tags
- Sql vs Mongo? - lets decide on one
  - For what reasons is one better for our design than the other?
