Employ.me

Where we're at:

- Data Model created
- General idea of application there, but may need fine-tuning
- Setup for application nearly completed (repo and workflow)
- Want to start MVP ASAP

Milestones:
    Achieved: Presentation, Team Contract
    Missed: None

Difficulties Encountered:
- Scheduling
    - It has already become evident that scheduling time to work together will be very difficult. We have two team members in their athletic season, which consumes a lot of time during the week and weekends (for tournaments and games). This makes meeting on the weekends difficult. We have also found meeting in the week difficult due to differences in our class schedules, and if and when we meet during the week, the time that we can meet for is limited.
- How can we make our application stand out/different from current software hiring solutions?

Changes to Problem Analysis/Design:
- Initial idea was to create a platform for undergrads to get hired. We want to add on to that the ability to keep track of all of your applications and where you are in the process.
- Cover letter can be added to an application.
- User has option to include their resume or LinkedIn. All information about a user's skills, courses, etc. will be pulled directly from LinkedIn. This will allow us to focus more on our unique features.
